Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

DESCRIPTION OF THE NATIONAL SURVEY OF SUBSTANCE ABUSE TREATMENT SERVICES (N-SSATS)

The 2004 National Survey of Substance Abuse Treatment Services (N-SSATS) was conducted between March and October 2004, with a reference date of March 31, 2004. It is the 27th in a series of national surveys begun in the 1970s designed to collect data on the location, characteristics, and utilization of alcohol and drug treatment facilities and services throughout the 50 States, the District of Columbia, and other U.S. jurisdictions. The Office of Applied Studies, Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services, plans and directs N-SSATS

N-SSATS is designed to collect information from all facilities² in the United States, both public and private, that provide substance abuse treatment. (Additional information on N-SSATS, its history, and changes in the survey and survey universe over time is provided in *N-SSATS Background*.)

N-SSATS provides the mechanism for quantifying the dynamic character and composition of the U.S. substance abuse treatment delivery system. The objectives of N-SSATS are to collect multipurpose data that can be used to—

- assist SAMHSA and State and local governments in assessing the nature and extent of services provided in State-supported and other treatment facilities and in forecasting treatment resource requirements;
- update SAMHSA's Inventory of Substance Abuse Treatment Services (I-SATS), which includes all known drug and alcohol abuse treatment facilities (see N-SSATS Background);
- analyze treatment services trends and conduct comparative analyses for the nation, regions, and States;
- generate the *National Directory of Drug and Alcohol Abuse Treatment Programs*, a compendium of facilities approved by State substance abuse agencies for the provision of substance abuse treatment; and
- update the information in SAMHSA's Substance Abuse Treatment Facility Locator, a searchable database of facilities approved by State substance abuse agencies for the provision of substance abuse treatment. The Treatment Facility Locator is available on the Internet at:

http://findtreatment.samhsa.gov

¹ The jurisdictions include the territory of Guam, the Federated States of Micronesia, the Republic of Palau, the Commonwealth of Puerto Rico, and the Virgin Islands of the United States.

² In this report, entities responding to N-SS ATS are referred to as "facilities." As discussed later in the report, a "facility" may be a program-level, clinic-level, or multi-site respondent.

Data Collection Procedures for the 2004 N-SSATS

Field period and reference date

The field period for the 2004 N-SSATS ran from March 31, 2004 through October 1, 2004, with a reference date of March 31, 2004.

Survey coverage

The 2004 N-SSATS facility universe included all 16,651 active treatment facilities on SAMHSA's I-SATS at a point 6 weeks prior to the survey reference date. Facilities added by State substance abuse agencies or discovered during the first 3 weeks of the survey were also included in the survey universe.

Content

The 2004 N-SSATS survey instrument was a 10-page document with 37 numbered questions. (See *Questionnaire*.) Topics included:

- Facility identification information
- Facility focus (substance abuse treatment services, mental health services, mix of mental health and substance abuse treatment services, general health care, other)
- Facility operation (private for-profit; private non-profit; government—local, county, or community; State; Federal; tribal)
- Hotline operation
- Services offered (assessment services, substance abuse therapy and counseling, pharmacotherapies, testing, transitional services, other services)
- Operation of an OpioidTreatment Program (OTP) certified by the SubstanceAbuse and Mental Health ServicesAdministration
- Services in sign language for the hearing impaired
- Services in languages other than English

- Types of clients accepted into treatment (adolescents, clients with co-occurring mental and substance abuse disorders, criminal justice clients, persons with HIV orAIDS, gays or lesbians, seniors or older adults, adult women, pregnant or postpartum women, adult men, DUI/DWI offenders, other)
- Special programs or groups offered for specific types of clients (adolescents, clients with co-occurring mental and substance abuse disorders, criminal justice clients, persons with HIV or AIDS, gays or lesbians, seniors or older adults, adult women, pregnant or postpartum women, adult men, DUI/DWI offenders, other)
- Types of treatment provided
 - Hospital inpatient (detoxification, treatment)
 - Non-hospital residential (detoxification; short-term, i.e., 30 days or less; long-term, i.e., more than 30 days)
 - Outpatient (detoxification, methadone maintenance, day treatment or partial hospitalization, intensive, regular)
- Payment options
- Receipt of public funding for substance abuse treatment programs
- Managed care participation
- Number of clients in treatment on March 31, 2004 (total, clients under age 18, clients receiving methadone or buprenorphine)
- Number of beds designated for non-hospital residential and hospital inpatient substance abuse treatment
- Client substance abuse problem treated
- Facility licensure, certification, or accreditation

Table 1
N-SSATS forms accounting, response rate, and mode of response: 2004

Facility Internet access and web site availability

Data collection

Six weeks before the survey, letters were mailed to all facilities to alert them to expect the survey. An additional benefit of the letters was to update records with new address information returned from the post office. On the survey reference date, data collection packets, including the questionnaire, SAMHSA cover letter, State-specific letter of endorsement, information on completing the survey on the Internet, and a sheet of requently Asked Questions, were mailed to each facility. During the data collection phase, contract personnel were available to answer facilities'

questions concerning the survey. Support in responding to questions for those facilities completing the questionnaire over the Internet was also available. Four to 5 weeks after the initial questionnaire mailing, thank you/reminder letters were sent to all facilities. Approximately 8 weeks after the initial questionnaire mailing, non-responding facilities were sent a second questionnaire mailing. About 4 to 5 weeks after the second questionnaire mailing, non-respondents received a reminder telephone call. Those facilities that had not responded within 2 to 3 weeks of the reminder call were telephoned and asked to complete the survey by telephone. The overall response rate was 96 percent.

Forms accounting and response rate

Summary response rate information is presented in Table 1. Questionnaires were mailed to a total of 16,651 facilities believed to offer substance abuse treatment services. Of these facilities, 11 percent were found to be ineligible for the survey because they had closed or did not provide substance abuse treatment or detoxification on March 31, 2004. Of the remaining 14,779 facilities, 96 percent completed the survey.

Exclusions

Of the 14,167 survey respondents, 390 facilities provided information but were deemed out of the scope of the published report and the public use file. The excluded facilities fell into three categories:

- 147 excluded facilities were halfway houses that did not provide substance abuse treatment. These facilities were included in the survey so that they could be listed in the Directory and on the Treatment Facility Locator, but were excluded from the published report and the public use file.
- 95 excluded facilities were jails, prisons, or other organizations that treated incarcerated clients exclusively.

² Facilities whose client counts were included in or "rolled into" other facilities' counts and whose facility characteristics were not reported separately.

Table 2
Number of N-SSATS facilities reporting client and/or facility data: 2004

Type of data reported	Number of facilities for which facility characteristics were reported	Number of facilities for which client counts were reported
Total	13,454	13,684
Facility characteristics and client counts for responding facility only	11,666	11,666
Facility characteristics for responding facility only; client counts for responding facility and other facilities as well	661	2,018
Facility characteristics only (client counts reported by another facili	ity) 1,127	0

¹ Excludes 147 non-treatment halfway houses, 95 facilities treating incarcerated clients only, and 148 non-State-approved solo practitioners.

SOURCE: Office of Applied Studies, Substance Abuse and Mental Health Services Administration, National Survey of Substance Abuse Treatment Services (N-SSATS), 2004.

• 148 excluded facilities were solo practitioners. I-SATS and N-SSATS are designed to include facilities rather than individuals. Solo practitioners are listed and surveyed only if the State substance abuse agency explicitly requests that they be included. The excluded solo practitioners had not been identified for inclusion by the State substance abuse agency.

An additional 323 facilities whose client counts were included in or "rolled into" other facilities' counts and whose facility characteristics were not reported separately were also excluded from facility counts in the published report and the public use file. However, their client counts are included.

After allowing for the exclusion of 390 out-of-scope facilities and 323 rolled-up facilities, 13,454 eligible respondent facilities were included in the 2004 N-SSATS published report and the public use file.

Number of respondents reporting facility and client data

Table 2. There were a total of 13,454 eligible respondents to the 2004 N-SSATS. The breakdown of these respondents with respect to their reporting of facility data and client counts is summarized below.

- 11,666 facilities reported both facility data and client counts for their own organizations.
- 661 facilities reported facility characteristics for their own facility and provided client counts for their own facility and for other facilities. These 661 facilities reported client counts for a total of 2,018 facilities, including themselves.
- 1,127 facilities reported facility characteristics only. Their client counts were reported by another facility.

Quality assurance

All mail questionnaires were reviewed manually for consistency and for missing data. After data entry, automated quality assurance reviews were conducted. These incorporated the rules used in manual editing, plus consistency checks and checks for data outliers not readily implemented by manual review. Calls were made to facilities to clarify questionable responses and to obtain missing data.

If facilities could not be reached during the edit callbacks, responses that were clearly in error were replaced by imputation.

The Internet questionnaire was programmed to be self-editing; that is, respondents were prompted to complete missing responses and to confirm or correct inconsistent responses.

Item non-response

Careful editing and extensive follow-up have minimized item non-response. (See Item Percentage Response Rates for N-SSATS 2004.) Although there were instances of non-response in most data items, item non-response was generally low, between less than 1 percent and percent for most items. An exception was the question on payment types accepted by the facility, where non-response rates ranged as high as 12 percent for the various response categories.

Missing data for client count variables (e.g., the number of clients in hospital inpatient, non-hospital residential, and outpatient treatment) were imputed.

Methodology of Imputation of Missing Client Counts

A total of 89 facilities were missing one-day census client count values for one or more types of service (i.e., hospital inpatient detoxification, hospital inpatient treatment, non-hospital residential detoxification, etc.). A facility was given imputed

values for a type of service if it reported that it provided the service but had not provided client counts for that service type. For example, if a facility reported that it provided hospital inpatient services and outpatient services, but not non-hospital residential services, client values were imputed for the hospital inpatient and outpatient variables only. Missing values for the number of clients under age 18 and the number of hospital inpatient beds and/or non-hospital residential beds were not imputed.

When available, client values from the 2003 N-SSATS were used to impute the missing client counts on the 2004 N-SSATS. In all other cases, the average client value, stratified by State and facility operation, was used to impute the missing client counts. If a facility were unique in its State and facility operation category, values were imputed using average values for the State only. Client counts were imputed for each type of service (i.e., hospital inpatient detoxification, hospital inpatient treatment, non-hospital residential detoxification, etc.) and summed to the larger service type totals (total hospital inpatient clients, total non-hospital residential clients, and total outpatient clients), and finally to total clients.

Further Data Considerations and Limitations

As with any data collection effort, certain procedural considerations and data limitations must be taken into account when interpreting data from the 2004 N-SSATS. Some general issues are listed below, and other considerations are detailed in *N-SSATS Background*. Considerations and limitations of specific data items are discussed where the data are presented.

 N-SSATS attempts to obtain responses from all known treatment facilities, but it is a voluntary survey. There is no adjustment for the approximately 4 percent facility non-response.

- N-SSATS is a point-prevalence survey. It provides information on the substance abuse treatment system and its clients on the reference date. Client counts do not represent annual totals. Rather, N-SSATS provides a "snapshot" of substance abuse treatment facilities and clients on an average day.
- Multiple responses were allowed for certain variables (e.g., services provided and specialized programs).

ITEM PERCENTAGE RESPONSE RATES FOR N-SSATS 2004

Table 3 is a table of response rates for se lected questions from the N-SSATS 2004 questionnaire. As seen in the table, the majority of response rates exceeded 99 percent.

N-SSATS BACKGROUND

Survey History

N-SSATS has evolved from national survey efforts begun in the 1970s by the National Institute on Drug Abuse (NIDA) to measure the scope and use of drug abuse treatment services in the United States. The sixth of these surveys, conducted in 1976, introduced the data elements and format that have formed the core of subsequent surveys. These include organizational focus, service orientation, services available, clients in treatment by type of care, and inpatient/residential capacity. The 1976 survey, called the National Drug Abuse Treatment Utilization Survey, was repeated in 1977 and 1978.

In 1979, the National Institute onAlcohol Abuse and Alcoholism (NIAAA) became a cosponsor of the survey, alcoholism treatment facilities were added, and the study was renamed the National Drug and Alcoholism Treatment Utilization Survey. This survey was repeated in 1980 and 1982. In 1984, a one-page version called the National Alcoholism and Drug Abuse Program Inventory was used. In 1987, the full version of the survey was reinstated and renamed the National Drug and Alcoholism Treatment Unit Survey (NDATUS). NDATUS was conducted annually from 1989 to 1993.

In 1992, with the creation of SAMHSA, responsibility for conducting the survey shifted to SAMHSA's Office of Applied Studies. The survey was redesigned, and conducted annually as the Uniform Facility Data Set (UFDS) survey from 1995 to 1998. During these years, the survey was conducted by mail with telephone follow-up of non-respondents. The 1999 survey year was a transition year during which the survey was re-

designed, and an abbreviated telephone survey of treatment facilities was conducted. In 2000, a redesigned full mail survey was reinstated with telephone follow-up; it was renamed the National Survey of Substance Abuse Treatment Services (N-SSATS). The reference date for the annual survey had always been the end of September or beginning of October. After the 2000 survey, the reference date was changed to the end of March, and no survey was conducted during 2001.

In 2000, the use of an Internet-based questionnaire was tested, and beginning in 2002, all facilities were offered the opportunity to respond via the Internet.

N-SSATS in the Context of the Drug and Alcohol Services Information System (DASIS)

N-SSATS is one of the three components of SAMHSA's Drug and Alcohol Services Information System (DASIS). The core of DASIS is the Inventory of Substance Abuse Treatment Services (I-SATS), a continuously-updated, comprehensive listing of all known substance abuse treatment facilities. The other components of DASIS are N-SSATS and the Treatment Episode Data Set (TEDS), a client-level database of admissions to substance abuse treatment. Together, the components provide national- and State-level information on the numbers and characteristics of individuals admitted to alcohol and drug treatment programs and describe the facilities that deliver care to those individuals.

I-SATS is the list frame for N-SSATS. Facilities in I-SATS fall into two general categories and are distinguished by the relationship of the facil-

ity to its State substance abuse agency. These categories are described below.

Treatment facilities approved by State substance abuse agencies

The largest group of facilities (about 11,400 in 2004) includes facilities that are licensed, certified, or otherwise approved by the State substance abuse agency to provide substance abuse treatment. State DASIS representatives maintain this segment of I-SATS by reporting new facilities, closures, and address changes to SAMHSA. Some facilities are not licensed, certified, or otherwise approved by the State agency. Some private for-profit facilities fall into this category. This group also includes programs operated by Federal agencies, the Department of Veterans Affairs (VA), the Department of Defense, and the Indian Health Service. I-SATS records for Federally-operated facilities are updated annually through lists provided by these agencies.

Treatment facilities not approved by State substance abuse agencies

This group of facilities (about 2,000 in 2004) represents the SAMHSA effort in recent years to make I-SATS as comprehensive as possible by including treatment facilities that State substance abuse agencies, for a variety of reasons, do not fund, license, or certify. Many of these facilities are private for-profit, small group practices, or hospital-based programs. Most of them are identified through periodic screening of alternative source databases. (See *Special efforts to improve survey coverage*, below.) State substance abuse agencies are given the opportunity to review these facilities and to add them to the State agency-approved list, if appropriate.

Survey Coverage

The use of I-SATS as the list frame for N-SSATS imposes certain constraints related to the unit of response and the scope of facilities included. In

addition, the expansion of I-SATS in recent years to provide a more complete enumeration of substance abuse treatment facilities means that year-to-year comparisons of the numbers of facilities reporting to N-SSATS must be interpreted with caution.

Unit of response

N-SSATS is designed to collect data from each physical location where treatment services are provided. Accordingly, SAMHSA requests that State substance abuse agencies use the point of delivery of service (i.e., physical location) as the defining factor for a facility. It also requests that facilities be included in I-SATS, N-SSATS, and TEDS at the same administrative level so that record linkage among the three data sets is valid. Because of the different State administrative systems, however, there are some inconsistencies in implementation. For example, in some States, multiple treatment programs (e.g., detoxification, residential, and outpatient) at the same address and under the same management have separate State licenses. These are treated as separate by the State substance abuse agency, and are given separate I-SATS ID numbers. In other States, multiple sites are included as a single entity under a parent or administrative unit. In many of these cases, individual sites can report services data in N-SSATS, but client data are available only at higher administrative level. Beginning in 1995, efforts have been made to identify facility networks and to eliminate duplicate reporting by networks. For most facilities, reporting level remains consistent from year to year. However, beginning in 1998, an emphasis was placed on collecting minimum information from all physical locations, and this has resulted in an increase in the number of facilities.

Special efforts to improve survey coverage

The great majority of treatment facilities in I-SATS are administratively monitored by State substance abuse agencies. Therefore, the scope of facilities

included in I-SATS is affected by differences in State systems of licensure, certification, accreditation, and the disbursement of public funds. For example, some State substance abuse agencies regulate private facilities and individual practitioners while others do not. In some States, hospital-based substance abuse treatment facilities are not licensed through the State substance abuse agency.

To address these differences, SAMHSA conducted a large-scale effort during 1995 and 1996 to identify substance abuse treatment facilities that, for a variety of reasons, were not on I-&TS. Some 15 source lists were considered, and facilities not on I-S ATS were contacted to ascertain whether they provided substance abuse treatment. As expected, this yielded a number of hospital-based and small private facilities that were not on I-SATS. (These facilities were surveyed in 1995 and 1996, but they were not included in the published results of the survey until 1997.) Analysis of the results of this effort led to similar but more targeted updates before subsequent surveys. Potential new facilities are identified using data from the American Business Index, the annual American Hospital Association survey, and SAMHSA's biannual Inventory of Mental Health Organizations, the source lists that yielded the most new facilities in 1995 and 1996. Additional facilities are also identified during the survey itself by survey participants, who are asked to report all of the treatment facilities in their administrative networks. All newly identified facilities are initially included as not approved by the State substance abuse agency. State substance abuse agencies are given the opportunity to review these facilities and to add them to the State agency-approved list, if appropriate.

Figure 1 is a time line detailing the major changes in survey scope and administration that may have affected the numbers of reporting facilities and clients eligible for inclusion in this report.

Expansion of survey coverage to include all sites within networks at which treatment was provided yielded a net increase of about 2,600 facilities between 1997 and 1998. These additions were not necessarily new facilities, but were facilities not previously included in the survey as separate sites. The number of facilities reporting continued to increase in 1999, but at a slower pacea net increase of 1,800 facilities. The increase between 1998 and 1999 was in large part because of the improved survey response rate (95 percent in 1999 vs. 90 percent in 1998). In 2003, the number of facilities reporting decreased slightly. The survey response rate remained the same in 2004 as it was in 2003, 96 percent.

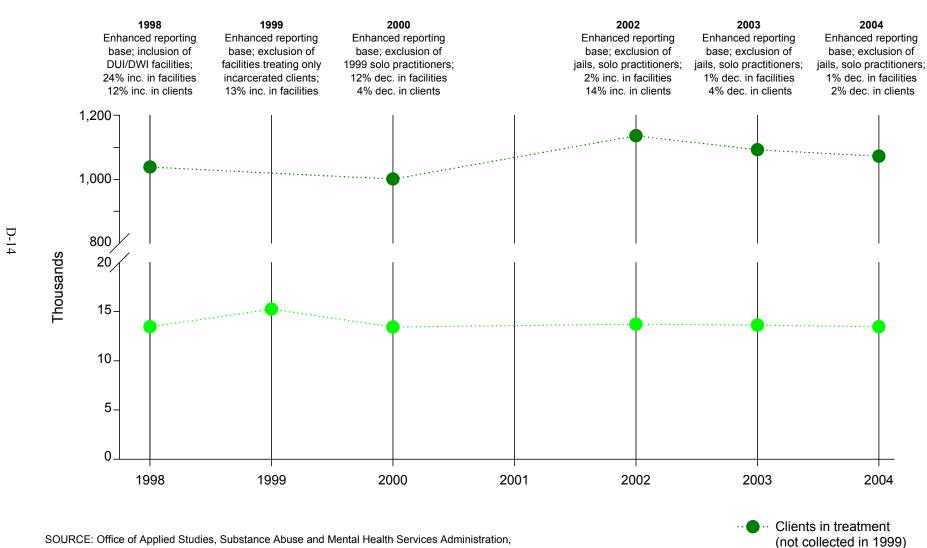

Data collection

Until 1996, State substance abuse agencies distributed and collected the UFDS survey forms. Beginning in 1996, data collection was centralized; since that time, SAMHSA has mailed facility survey forms directly to and collected forms directly from the facilities, and has conducted follow-up telephone interviews with the facility director or his/her designee.

Non-response

Beginning in 1992, SAMHSA expanded efforts to obtain information from non-responding facilities. A representative sample of non-respondents was contacted and administered an abbreviated version of the survey instrument via telephone. In 1993 and later years, this effort was extended to all non-responding facilities. In 1997, a series of measures was introduced to enhance the survey response rate. These included advance notification and improved methods for updating address and contact information. In 2003 and 2004, use of these methods and intensive telephone follow-up resulted in a non-response rate of only 4 percent. For 96 percent of facilities in the sample, it was possible either to complete the survey or to determine that the facility had closed or was otherwise ineligible.

Client substance abuse problem treated		X	x	X	x
Licensure/certification of facility	X		x	X	x
Licensure/certification of staff	X				

Exclusions

In 1997, facilities offering only DUI/DWI programs were excluded; these facilities were reinstated in 1998.

Facilities operated by the Bureau of Prisons (BOP) were excluded from the 1997 UFDS survey and subsequent surveys because SAMHSA conducted a separate survey of correctional facilities.¹ During that survey, it was discovered that

I-SATS and N-SSATS are designed to include specialty substance abuse treatment facilities rather than individuals. Solo practitioners are listed on I-SATS and surveyed in N-SSATS only if the State substance abuse agency explicitly requests that they be included.

Beginning in 2000, halfway houses that did not provide substance abuse treatment were included on I-SATS and in N-SSATS so that they could be listed in the *National Directory of Drug and Alcohol Abuse Treatment Programs* and on the

jails, prisons, and other organizations treating incarcerated persons only were poorly enumerated on I-SATS. Beginning in 1999, these facilities were identified during the survey and excluded from analyses and public-use data files.

SAMHSA, Office of Applied Studies. Substance Abuse Treatment in Adult and Juvenile Correctional Facilities: Findings from the Uniform Facility Data Set 1997 Survey of Correctional Facilities. Drug and Alcohol Services Information System Series: S-9. DHHS Publication No. (SMA) 00-3380. Rockville, MD, 2000.

Treatment Facility Locator (http:/ findtreatment.samhsa.gov). These facilities were excluded from analyses and public-use data files.

Changes in Survey Content

Since 1992, SAMHSA has made adjustments each year to the survey design, both to minimize non-response and to include areas of emerging interest such as the role of managed care *Table 4* shows the major content areas for the survey from 1995 to 2004.

National Survey of Substance Abuse Treatment Services (N-SSATS), 2004

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

ICPSR has an FAQ on copyright and survey instruments.

Variable Type: numeric

DIVISION: Added: Census Division

CENSUS DIVISION: Census divisions are groupings of states that are subdivisions of the four census regions. There are nine divisions, which the Census Bureau adopted in 1910 for the presentation of data. The divisions and the states

included in them are:

- U.S. TERRITORIES: American Samoa, Fed Micronesia, Guam, Palau, Puerto Rico, Virgin Islands.
- NEW ENGLAND: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.
- MIDDLE ATLANTIC: New Jersey, New York, and Pennsylvania.
- EAST NORTH CENTRAL: Illinois, Indiana, Michigan, Ohio, and Wisconsin.
- WEST NORTH CENTRAL: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.
- SOUTH ATLANTIC: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.
- EAST SOUTH CENTRAL: Alabama, Kentucky, Mississippi, and Tennessee.
- WEST SOUTH CENTRAL: Arkansas, Louisiana, Oklahoma, and Texas.
- MOUNTAIN: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.
- PACIFIC: Alaska, California, Hawaii, Oregon, and Washington.

HOTYN: Hotline - yes/no

9. Does this facility operate a hotline that responds to substance abuse problems?

A hotline is a telephone service that provides information,

referral, or immediate couseling, frequently in a crisis situation.

If this facility is part of a gruop of facilities that operates a central hotline to respond to substance abuse problems, you should mark "yes."

Do not consider 911 or the local police number a hotline for the purpose of this survey.

T_CLI8: Clients in Day Tx/Partial Hosp

26a. As of March 31, 2004, how many active clients were enrolled in each of the following OUTPATIENT substance abuse services at this facility?

(3) Outpatient day treatment or partial hospitalization (20 or more hours per week)

Active outpatient clients are someone who:

1 - were seen at this facility for a substance abuse treatment or detox service at least once during the month of March 2004

AND

2 - were still enrolled in treatment on March 31, 2004.

COUNT a client in one service only, even if the client received multiple services.

DO NOT count co-dependents, relatives, friends, or other non-treatment clients.

TOTADMIS: Total # of admissions for Sub Abuse Tx

March 31, 2004, how many ADMISSIONS for substance abuse treatment did this facility have? Count every admission and re-admission in this 12-month period. If a person was admitted 3 times, count this as 3 admissions.

Number of substance abuse admissions in 12-month period

FOR OUTPATIENT CLIENTS, consider an admission to be the initiation of a treatment program or course of treatment. Count admissions into treatment, not individual treatment visits.

IF DATA FOR THIS TIME PERIOD are not available, use the most recent 12-month period for which you have data.
